

Charge Guns

ECI Refrigerant Charging

GUN OPTIONS

RS200™:

The RS200™ has an air actuated plunger that allows reclamation of residual refrigerant remaining in the gun manifold after charging. A built in sensor detects if the gun is not attached to the unit and interlocks with the charge station, shutting off refrigerant flow for the safety of the operator. (Customizable to match your unit's connections.)

RP180™:

The RP180™ was designed with a 180° swivel handle to make it easier for the operator to connect to the unit in ergonomically difficult situations. Its lightweight aluminum construction further minimizes operator fatigue. (Customizable to match your unit's connections.)
