

Final-Leak Plus™

Final Refrigerant Leak Test

Refrigerant leaks identified at a customer site are embarrassing. Yet they can occur as a result of the system running at operational pressures during run test and/or the sealing of process tubes. Located after ECI's AutoTest™ Module, Final-Leak Plus™, our Final Leak Test is a final assurance that refrigerant leaks will be found at your plant instead of in the field. Teaming with ECI's LeakProof™ Module, Final-Leak Plus closes the loop, assuring customers of your zero tolerance for leaks.

Features:

- User defined report variables
- Calibration verification schedule of leak detector is computer mandated
- Displays average cycle time and quantity of units through the station
- Manual screen for maintenance control of I/O to aid in troubleshooting
- Runs on network or local drive for 100% uptime
- Microsoft® SQL Server® database
- Windows® platform
- Powered by InterLink
- Automatically selects correct refrigerant based on model number
- Prompts user to enter defect codes upon unit failure
- **User defined optional reports upon unit pass**

Options:

- Touch screen monitor
- On-demand printing integration
- Cordless bar code scanner
- Capable of scanning key components
- Customer specified PC
- Integrates with customer specified leak detector
- Customizable hardware
