TOP 10 REASONS

Why ECI should implement your key component verification system <u>INSTEAD</u> of your IT department

DEDICATED RESOURCES

Every day you spend waiting for your IT department to "get around to it" you're wasting money on costly re-works, warranty claims and line inefficiency. Of course they mean well, but there's always another fire to put out.

EXPERTISE

It may sound simple, but key component verification takes thousands of lines of code to work properly. Originally written in DOS, re-written for Windows and thoroughly debugged through years of development, ECI's KeyScan™ is headache free.

EXPERIENCE

ECI has successfully implemented key component verification systems in some of the largest manufacturing plants in the world, with a wide variety of operating systems and databases (MAPICS, AS400, Microsoft SQL Server, etc.).

LONGEVITY

IT personnel come and go. Who's going to fix it when they're gone? ECI has been around since 1984. Through the years we've had to re-write a number of botched jobs by "do-it-yourselfers". We'll be here when you need us.

SUPPORT

ECI is able to troubleshoot your system over the internet, maximizing your uptime if questions arise. Since all of our software development is done in-house, we can customize and/or update your source code quickly and efficiently.

LIFETIME SOFTWARE WARRANTY

ECI offers a lifetime software warranty with every piece of software we write. Our KeyScan™ software has been thoroughly debugged through years of development, but in the unlikely event of a program "glitch" we'll fix your code for free.

COMPLETE INTEGRATION

Many plants request ECI to program interlocks that only allow units that have passed KeyScan™ to be further processed. Similarly, subsequent stations can be equipped to verify components without having to send the unit back for verification.

ADVANCED FEATURES

ECI programs in a number of advanced features, including: password protection, approved component deviation, direct BOM (Bill of Materials) interfacing, detailed analysis and reporting, model/serial # tracking, and a user friendly interface.

ISO 9001:2000 CERTIFIED

ECI has been in the quality control business since 1984 and is ISO certified. Besides being committed to improving the quality of our clients' products, ECI is also committed to the continuous improvement of our own processes and services as well.

KNOWN DELIVERY TIME & BUDGET

Why wait? ECI can have you up and running in weeks–rather than years with no "hidden costs". Schedule your free 30 minute consultation today, to learn how key component verification can be implemented in your plant and bring significant returns on your investment (ROI).
