

PLC Integration

Industrial Computer Interfacing

The IPCS allows total integration of your existing process-control, testing, and fabrication equipment—regardless of manufacturer. A networked PC provides a user-friendly interface between the proprietary network(s) of your existing PLC's and the IPCS, offering complete flexibility and complete integration. Any PLC-controlled machine or device may be integrated into the IPCS. All PLC-data is monitored and recorded for reporting and analysis. Real-time status reporting is available.

Collected Data:

Integrate the following systems under one Microsoft® Visual Basic® platform using Microsoft® SQL Server® database:

- Material handling systems
- Coil benders
- Vision systems
- Torque guns
- Fin presses
- Punches
- Component manufacturing
- Paint systems
- Welding systems
- Barcode applicators
- Dehydration ovens
- Autobrazers
- Refrigerant delivery/reclaim systems
- Helium delivery/reclaim systems
