

CalCart™

Calibration Software & Equipment

CalCart™ is a portable unit that contains all necessary calibration software, equipment and NIST standards required to calibrate the IPCS. Calibration and station-to-station correlation are required to compensate for the inherent manufacturing tolerance differences in like sensors and measuring devices. All sessions are automatically recorded and stored to the database for reference and management.

Features:

- Contains all necessary calibration software, equipment and NIST standards required to calibrate the IPCS
- Calibration software satisfies the ISO requirement that the software be calibrated along with the sensor and its transducer
- A linear interpolation technique allows entry of an infinite number of data points
- Calibration sessions are automatically recorded and stored to the database for reference and management
- Satisfies ISO requirements of documentation

Included Reports:

- Date
- Time
- Technician
- Original and adjusted measurements
