

Material Handling

Experience & Expertise

ECI has the experience you need for engineering and implementing controls for a variety of material handling conveyor systems: power and free, inverted power and free, chain driven live roller (CDLR), belt, belt-over-roller, shaft-driven live roller, accumulation, line-shaft driven, power-turn table, lifts, and elevators. Our combined engineering experience of designing material handling solutions spans five decades, and our list of satisfied clients includes such distinguished names as General Motors Corporation and the United States Air Force.

ECI Engineering integrates material handling into the Integrated Process Control System for automatic routing of product. Although we have preferred conveyor suppliers, we are happy to work with manufacturers with whom you may already possess a good working relationship. Contact us at the inception of your next material handling project and rely on our experience to help you design and implement the system.

Advantages:

- Complete IPCS integration
- Automatic routing of product
- Custom engineering for your specific needs
- ECI's experience and expertise
