

PackOut™

The ECI Watchdog

PackOut™ the ECI Watchdog is your guarantee that your customer receives the best quality product you can provide. An all-encompassing crosscheck through all processes, PackOut is the final assurance that each unit has passed all previous quality tests. No defect gets through. Electrical interlocks prohibit final packing and shipping until all tests have been passed. That gives your customer a consistent level of quality--guaranteed.

Features:

- Integrates with shipping banders, stretch wrappers, and boxing stations
- Electrical interlocks prohibit final packing and shipping until all tests have been passed
- Displays average cycle time and quantity of units through the station
- Manual screen for maintenance control of I/O to aid in troubleshooting
- Interlocks prohibit failed or untested units from cycling at subsequent ECI IPCS stations
 - Runs on network or local drive for 100% uptime
 - Microsoft® SQL Server® database
 - Windows® platform
 - Powered by InterLink

Options:

- Touch screen monitor
- Cordless bar code scanner
- Customer specified PC
- Customizable hardware

Advantages:

- Verifies that each unit has passed all mandatory tests and procedures before it is shipped
- Watchdog interlocks make it impossible to send units that have failed prior inspection points
- Increased quality containment provides greater customer satisfaction
- Provides support for accurate production reporting
